Bug corrections

2043	The "BC Progress" report is incorrect when a system table has a different name than SystemData
2624	Admin crashes when right clicking on "go to definition" on a team selected from a queue
2966	Admin crashes after a combination of the "go to definition" shortcut and the use of the scroll up/down bar
2974	Various translations errors
2978	Admin: some rights settings can have an impact on default super user (100)
2986	In statistical database, "DialerAction" (and related) value can be incorrect under some specific timings
2992	Using custom datasource can prevent the admin to work under some improper datasource configuration
3001	In admin data management, preview data grid show no result
3005	Applying callback rules for missed callbacks considers that the campaign's system table is "SystemData" instead of the dynamic name chosen for it
3014	Creation of new appointment context generate exceptions in logs
3020	Admin: removing an appointment context can result into the validation error during the commit changes phase
3021	Mail activity: The recipient (to) field on receipt and the sender (from) field when sending an email contains a GUID instead of an email address
3025	Starting the server without at least a carrier prevents manual calls
3027	Using licensing V4 prevents admin objects to be loaded successfully except in first domain.
3029	The dialer generates exception preventing dialing if an agent is not associated to any team (2.3.12 only)
