

## Nixxis Contact Suite 2.3.5

Generated on 30/06/2017 09:42:01

### Bug corrections

---

2454	Workflow and unattended activities are taken into account when evaluating targeted callbacks
2455	Some targeted callbacks can be skipped when multiple activities are available for generating those targeted callbacks
2459	Depending on performances and number of campaigns records, server could fail to update admin data on startup (causing failure during version update)
2461	Some DataManager traces are only visible in traces when an extra listener has been configured in application config
2466	GUI languages settings can be lost when upgrading to 2.3 (due to casing of "AgentTranslations" column names)
2467	Under some precise timing circumstances, a race condition can occur when using multiples admin simultaneously
2468	Right evaluation is too slow
2475	Sample Http.configfile does not suggest best applications order (reporting should be after admin)
